**Anchor Software Announces Additional Operating Platforms for MaxCASS™**  
***UNIX Version Certified by the USPS; Awaiting IBM Mainframe Certification***

**Plano, Texas – October 13, 2006** – ANCHOR SOFTWARE, LLC, a leading provider of data processing software for data quality, direct marketing and document design, today announced that, in addition to running under MS Windows, its MaxCASS solution is now available to run on UNIX and IBM Mainframe platforms. The UNIX version has been CASS™ certified by the United States Postal Service® (USPS®); and the IBM Mainframe version has been submitted for certification, which should be granted very soon. By offering MaxCASS on these platforms, Anchor expands its offering in the world of open systems technology and can now offer this industry-leading address verification, correction and standardization solution in nearly all operating environments.

“In keeping with our corporate commitment to improving overall data quality and offering alternative solutions to a market that has been dominated by a single vendor, we’re very excited about offering MaxCASS on UNIX and IBM Mainframe platforms. This is our first step in providing users a choice for data quality and direct marketing solutions, where they may not have had one before.” said Gary Siegel, President of Anchor Software.”

MaxCASS, when used in conjunction with its full complement of integrated features (DPV™, RDI™, Geographic Coding, LACS<sup>Link™</sup>, MaxMover™, Anchor’s certified solution for NCOA<sup>Link™</sup>, and ANK<sup>Link™</sup>) helps mailers maintain high quality address lists and achieve the lowest possible postage rates by ensuring addresses are accurate, current and conform to Postal Service™ standards.
