

## Product Information

### AddressPro ensures the accuracy and completeness of address data and improves deliverability.

As online shopping continues to increase, more and more ecommerce retailers are seeking to improve the time it takes to deliver a product while decreasing the cost of delivering the product. Hurried shoppers squeeze in shopping time at work, between household chores, going to the gym, and many other activities. As a result, the "ship to" address is sometimes entered incorrectly in online order forms. Simple typos and missing information can lead to major delays, increased costs, and failed deliveries. Address correction surcharges can be from \$13 to over \$70 per correction. For companies that have a business dependent upon shipping parcels, it is important to help your customers get faster more accurate delivery while ensuring that your business is not losing unnecessary money.

Anchor software's AddressPro Parcel solution offers address validation for real-time address correction, as addresses are being entered to ensure that the information corrected upon entry. Address information is corrected against USPS address data to validated and confirm the delivery address, suite information, rural street name conversion, and even apartment information. In addition, since some parcel shipping services charge a fee for residential delivery, this highly accurate solution will also provide a Residential Delivery Indicator (RDI) so that you can calculate accurate prices based on this information.

#### Features:

- Address validation
- Residential Indicator (RDI)
- Delivery Point Validation (DPV)
- Business Suite Validation (Suite<sup>Link</sup>)
- Locatable Address Conversion System (LACS<sup>Link</sup>)
- Apartment Append
- In-house or Cloud
