

AddressVerifier

Product Information

A callable API that corrects and verifies address information in real time

Assures the quality of address information

Reduces returned shipments

Increases data entry productivity

Improves the accuracy of order information

Works on the Internet, on-line or in batch mode

Integrates with most applications

AddressVerifier™ instantly verifies or corrects individual addresses in real time. Optional modules include:

- Delivery Point Validation (DPV)
- GeoCoding for latitude and longitude
- The Telephone Area Code/Exchange

Accurate Mail Delivery

AddressVerifier™ improves the deliverability of your mail piece by matching the incoming address or your entire file against the most current USPS ZIP+4® database.

Applications

AddressVerifier™ is used to quickly enter and verify address and related information correctly, and can be embedded in Internet, on-line call center, point of sale or batch processing applications. After entering the ZIP code, house number, and just a few strokes of the street name, AddressVerifier™ provides the rest of the address.

Since AddressVerifier™ is a callable API for use in-house or via SaaS, there is no need to change the format of the current user program. User training is virtually immediate.

AddressVerifier™ is easily added to most of your current applications.
